Project Title :E-Commerce Order Management System for a Pet Supplies Store

Introduction

A Pet Supplies Store E-Commerce Order Management System is an online platform that allows customers to purchase pet food, toys, accessories, grooming products, and healthcare items. The system helps customers browse products, place orders, make payments, and track deliveries. It also enables administrators to manage products, customers, orders, and inventory efficiently.

Purpose

The purpose of this system is to simplify the process of buying and selling pet supplies online. It provides customers with a convenient shopping experience while helping store owners manage orders, stock, and customer information accurately. The system reduces manual work, improves data management, and ensures faster order processing.

Functions / Operations on the Data

1. Customer Registration and Login.
2. View and search pet products.
3. Add products to the shopping cart.
4. Place and confirm orders.
5. Process online payments.
6. Track order status and delivery.
7. Manage product inventory.
8. Update product details and prices.
9. Maintain customer information.
10. Generate sales and order reports.

Application Related to Functions

Function	Application
Customer Registration	Stores customer details securely.
Product Management	Add, update, delete, and display pet products.
Shopping Cart	Allows customers to select multiple products before checkout.
Order Management	Creates, updates, and tracks customer orders.
Payment Processing	Records successful and failed payment transactions.
Inventory Management	Updates stock automatically after each purchase.
Delivery Tracking	Shows the current status of the customer's order.
Report Generation	Produces sales, inventory, and order reports for the store owner.

Conclusion

The Pet Supplies Store E-Commerce Order Management System provides an efficient and reliable way to manage online pet supply sales. It improves customer satisfaction by offering easy ordering and tracking while helping store owners maintain accurate records of products, orders, inventory, and payments. The system makes business operations faster, more organized, and more efficient.
